Mathematics Setting and Marking Scheme Creator Kihui Wabiria 2015-09-14 A marking scheme is a tool used by the teacher to help him/her assess students. It helps him/her to distribute marks to a question depending on the questions set. It helps the teacher to assess the students quantitatively and to grade them as per their ability in the given examination. The research project encompassed identifying factors that contribute to the slow marking of exams in mathematics and poor performance of students in the subject .This encouraged me to come up with a model system which is faster and interactive, the model can be used by teachers and can equally be useful to students when practicing on their own without the help of the teacher. Being a quantitative research, interviews and observations were adopted as the main data collecting tools in attempt to capture the facts and the user needs in the light of the stake holders. The model results were qualitatively in agreement with the mathematics teachers results. This proves the usefulness of the model as a possible management tool in monitoring the marking of mathematics and any other science subject.

Concept Mapping as an Assessment Tool for Conceptual Understanding

in *Mathematics* Haiyue JIN 2022-05-05 This book investigates the practicability and effectiveness of the concept map as a tool for assessing students' conceptual understanding in mathematics. The author first introduces concept mapping and then employs it to investigate students' conceptual understanding of four different mathematical topics. Alongside traditional scoring methods, she adopts Social Network Analysis, a new technique, to interpret student-constructed concept maps, which reveals fresh insights into the graphic features of the concept map and into how students connect mathematical concepts. By comparing two traditional school tests with the concept map, she examines its concurrent validity and discusses its strengths and drawbacks from the viewpoint of assessing conceptual understanding. With self-designed questionnaires, interviews, and open-ended writing tasks, she also investigates students and teachers' attitudes toward concept mapping and describes the implications these findings may have for concept mapping's use in school and for further research on the topic. Scholars and postgraduate students of mathematics education and teachers interested in concept mapping or assessing conceptual understanding in classroom settings will find this book an informative, inspiring, and overall valuable addition to their libraries.

Global Mathematics and Mathematics Olympiad Graded Assessment Test with Competition: Mathematics - Assessment Outline, Sample Paper, Marking Scheme Mathewmatician "Global Mathematics and Mathematics Olympiad Graded Assessment Test" consists of separate assessments for the Mathematics and Mathematics Olympiad. Currently, there are 16 levels, with each level corresponding to a grade. Similar to music exams, there is no age restriction for participating in each level of assessment. Furthermore, we do not require participants to achieve a passing grade or above in previous levels or to have participated in previous level assessments, to participate in subsequent levels. "Global Mathematics and Mathematics Olympiad Graded Assessment Test" offers physical and online tests. The transcript and certificate will indicate the exam mode, whether it was taken physically or online, for reference. Participants of a certain age will participate in the "Global Mathematics and Mathematical Olympiad Graded Competition" simultaneously with the "Global Mathematics and Mathematical Olympiad Graded Assessment Test". The following are our visions. 1. To enable individuals with high mathematical aptitude to learn advanced mathematics and Olympiad mathematics more quickly, accelerating human progress and benefiting humanity. 2. In the future, academic qualifications will not be divided; instead, recruitment standards in the workplace will be based on grades obtained in various subjects and their levels from public assessments. 3. People with weaker mathematical abilities should spend the same amount of time mastering basic mathematics. Once they reach the level required for their chosen profession or further studies, they can stop, rather than forcing themselves to study mathematics in higher grades. 4. By utilizing public assessments, we can reduce the workload of teachers, thereby reducing the future demand for mathematics teachers. This allows talented individuals who are capable of dedicating themselves to mathematics education to contribute to an ever-expanding reservoir of mathematical knowledge, facilitating the continuous development of the mathematical field.
