Algorithmic Trading with Interactive Brokers Matthew Scarpino 2019-09-03 Through Interactive Brokers, software developers can write applications that read financial data, scan for contracts, and submit orders automatically.

Individuals can now take advantage of the same high-speed decision making and order placement that professional trading firms use. This book walks through the process of developing applications based on IB's Trader Workstation (TWS) programming interface. Beginning chapters introduce the fundamental classes and functions, while later chapters show how they can be used to implement full-scale trading systems. With an algorithmic system in place, traders don't have to stare at charts for hours on end. Just launch the trading application and let the TWS API do its work. The material in this book focuses on Python and C++ coding, so readers are presumed to have a basic familiarity with one of these languages. However, no experience in financial trading is assumed. If you're new to the world of stocks, bonds, options, and futures, this book explains what these financial instruments are and how to write applications capable of trading them.

The Landscape of History John Lewis Gaddis 2004 What is history and why should we study it? Is there such a thing as historical truth? Is history a science? One of the most accomplished historians at work today, John Lewis Gaddis, answers these and other questions in this short, witty, and humane book. The Landscape of History provides a searching look at the historian's craft, as well as a strong argument for why a historical consciousness should matter to us today. Gaddis points out that while the historical method is more sophisticated than most historians realize, it doesn't require unintelligible prose to explain. Like cartographers mapping landscapes, historians represent what they can never replicate. In doing so, they

combine the techniques of artists, geologists, paleontologists, and evolutionary biologists. Their approaches parallel, in intriguing ways, the new sciences of chaos, complexity, and criticality. They don't much resemble what happens in the social sciences, where the pursuit of independent variables functioning with static systems seems increasingly divorced from the world as we know it. So who's really being scientific and who isn't? This question too is one Gaddis explores, in ways that are certain to spark interdisciplinary controversy. Written in the tradition of Marc Bloch and E.H. Carr, *The Landscape of History* is at once an engaging introduction to the historical method for beginners, a powerful reaffirmation of it for practitioners, a startling challenge to social scientists, and an effective skewering of post-modernist claims that we can't know anything at all about the past. It will be essential reading for anyone

who reads, writes, teaches, or cares about history.

to help them take part in the

ongoing debate themselves.

Cities of Roman Italy Guy de la Bedoyere 2010-01-25 The ruins of Pompeii, Herculaneum, and Ostia have excited the imagination of scholars and tourists alike since early modern times. The removal of volcanic debris at Pompeii and Herculaneum, and the clearance of centuries of accumulated soil and vegetation from the ancient port city of Rome at Ostia, have provided us with the most important evidence for Roman urban life. Work goes on at all

three sites to this day, and they continue to produce new surprises. Pompeii is the subject of numerous books, but the other two cities are nothing like as well-served. This book, written by an archaeologist, historian and teacher with a lifelong interest in the Roman world, is designed for students of A-level and university courses on Classical Civilization who need a one-stop introduction to all three sites. Its principal focus is status and identity in Roman cities, and how they were expressed through institutions, public buildings and facilities, private houses and funerary monuments, against a backdrop of the history of the cities, their rise, their destruction, preservation and excavation. The reader is also guided towards other reading material and Internet sites that now offer unprecedented access to the cities.
